GUNNISON-DOLORES RIVER WATERSHED Ranking Criteria FY-03 12/9/02 WATER

A Minimum score of 35 points is necessary to be eligible

SECTION I: DELIVERY

•	mprove stream water quality by installing a permanent instream diversion						
	ructure esigned to eliminate annual heavy equipment disturbance of the stream						
	nannel. (20 points)						
	points						
2)	mprove the control of diverted water with the installation of a positive shut off						
g	ate at the water source. (10 points)						
	points						
-	ontrol irrigation delivery ditch <u>gully</u> erosion with the installation of pipe, tures, or new ditch grade. (10 points)						
Struc	points						
4)	mprove the management of diverted water with the installation of a measuring						
d	evise at the water source. (5 points)						
	points						
	liminate irrigation delivery ditch seepage with the installation of one of the						
tollo/	ving: Points/feet of ditch treated, maximum of 30 points						
	Install irrigation ditch lining with						
	soil amendments i.e. bentonite. 5 points						
	 Install fabric lined ditch 10 points 						
	 Install concrete lined ditch 15 point 						
	 Install irrigation pipeline 20 points 						
	points						
-	, , , , , , , , , , , , , , , , , , , ,						
r	regulate adequate delivery of water to irrigated fields. (5 points)						
	points						

SECTION II: ON-FIELD
1) Install structures for water control to regulate irrigation water delivered to the field. (Not risers on pipeline) (10 points)
points
2) Improve the management of diverted water with the installation of a measuring devise at the field. (5 points)
points
3) Install structures for water control to better distribute water within the field i.e. check structures, turn out slide gates, division boxes, etc. (5 points/structure-maximum of 20 points)
points
4) Improve irrigation efficiency, reduce deep percolation, and irrigation induced erosion by converting: (Select only one)
 In field dirt delivery ditch to pipe or lined delivery to open (wild) flood system.
points) Dirt ditch to lined ditch with siphon tubes (7 points) Dirt ditch (wild flooding) to gated pipe (10 points) Gated Pipe to Sprinkler or Drip System (15 points) Flood to Sprinkler or Drip System Flood to Guns or Side-roll (30 points) Flood to pivot or drip (35 points) Dirt ditch to pipe to gated pipe (20 points) Poor contour ditch system to improved contour ditch system (3 points) points
5) Reduce deep percolation, and irrigation erosion caused by irrigation tail-water by: (max. of 5)
points) Install tail-water ditch on non-erosive grade. (5 points) Install erosion control structures i.e. concrete or pipe drops (5 points) points
TOTAL POINTS
Tie Breaker: Cost/acre treated (Acres that will realize resource improvement due to application of practices). (Lowest cost per acre treated receives highest priority)
Cost per Acre Treated

Ranking Criteria FY-03 EQIP RANGE & GRAZING LAND 12/9/02 A minimum score of 20 points is necessary to be eligible

	A minimum score of <u>20 points is necessary to be engible</u>
1)	Improve grazing land health, by increasing plant diversity through the
	application of one or more of the following conservation practices: (5 points each) (15 points max)
	 Brush management to improve plant diversity Re-establishment of native plant species forbs, grasses and shrubs on

 Establishment of introduced plant species on pasture and hayland that will be managed separately from native plant communities.

2) Improve grazing distribution of animals with the installation of permanent water sources

with spacing based on terrain and travel distance to draw animals away from heavy use areas. (20 points)

_points

points

- **3)** Facilitate uniform grazing and allow for planned grazing and rest periods to allow for plant growth and reproduction. (choose only 1)
 - Attain minimum forage improvement (10 points)
 - Attain moderate forage improvement (15 points)
 - Attain high forage improvement (20 points)

rangeland.

Attain exceptional forage improvement (25 points)

____ points

4) Improve deteriorated riparian areas by installing one or more of the following conservation

practices. (5 points per practice type – 15 points max.)

- Fence riparian areas to facilitate proper management, can include water gaps, does not imply exclusion is necessary.
- Establish adapted grasses, forbs and woody species to protect eroded stream banks and adjacent areas.
- Install adapted structural erosion control practices to stop stream bank and channel erosion.

____points

TOTAL EROSION POINTS _____PTS

Examples:

Tie Breaking Criteria: 1. Soil Erodibility
2. Lowest Cost Per Acre

Additional Instructions:

Soil Erosion

Note: Benchmark value reflects current condition not worse case scenario.

- 1. Use RUSLE calculated for each field.
- 2. Use WEQ (management period not annual method). Total tons equals sum of all fields offered.
- Index = Colorado Irrigation Induced Erosion Index.
 Use dominate Soil K (each field)
 Weighted Average of Crop Rotation (each field)
 Sum of all fields
- 4. Gully or Ephemeral erosion.
- 5. Permanent Vegetative Cover
 A minimum of 75% adaptive perennial grass

Adaptive perennial species include: Native & introduced grasses, forbs, shrubs, and trees

Gunnison-Dolores Watershed WILDLIFE

EQIP Ranking Criteria FY 2003

Projects must have wildlife habitat improvement as the primary intent for use of funds, and fully described habitat management practices in the conservation plan.

1) The proposed contract is located within a priority wildlife area and species and habitat. See attached map or descriptions (mule deer for locations of wildlife areas.

9) Do planned practices encourage the establishment	shment or maintenance of native vegetation?
	Yes = 5 pts No = 0 pts
Total points (Maximum of 76 points possib	le)
Tie Breaker	
Cost share dollars per acre treated (acres actual acre treated receives highest priority)	ally physically changed) (Lowest cost per
acro treated receives highest phonty)	Cost Per Acre Treated

Species with stable or increasing populations, or not otherwise listed.

Priority Wildlife Areas

(See attached map)

Mule Deer Wildlife Area

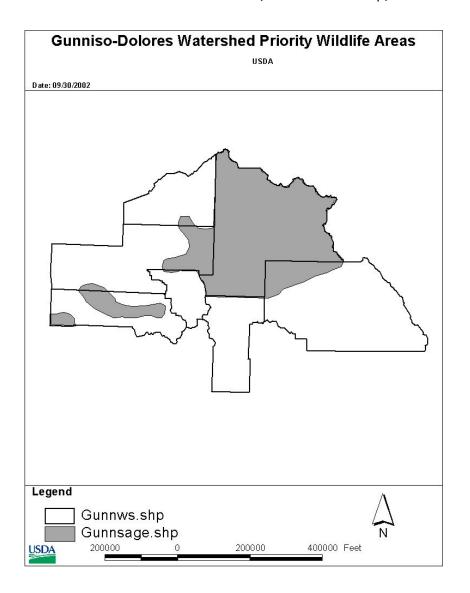

The mule deer wildlife area covers all land west or south of a line running from Interstate 25 at the Wyoming border, south to U.S. Highway 50, east to U.S. Highway 287/385 and south to the New Mexico border.

Riparian Habitat Areas

Riparian areas within designated critical habitats (as per USFWS designation) in the Colorado and San Juan River Basins for the various listed fish, southwest willow flycatcher, and yellow-billed cuckoo. Contact Area or State Biologist if unsure of critical habitat locations.

Gunnison's sage grouse

(See attached map)

NRCS Colorado Environmental Quality Incentive Program/EQIP FY 2003 EQIP Ranking Criteria - Non-Point Source Reduction – Waste Management

You can only use ranking A. or B. not both.

Α.	Operations – animal confinement (usually less than 50 animals) areas : (Use 1a or 1b r	not both)
1a)	Practices reduce pollution contributions to water course: (10 points/each practice type) 30 points max Diversion and collection Filter strips and/or buffers Water conveyance Fencing Alternate watering sources Collection and transport Composting facility	
1b)	Relocate facility (30 points .) Points	
2)	Ground water = 100/depth in feet to ground water (10 points. max.)	Points
3)	Distance to surface water = 1000/distance in feet to surface water (10 point	rs max.) Points
-	Documented water quality (associated to animal waste pollution) problem in drainage. (10 points)	Points
5) P	Proximity to urban development (4 houses per 40 acres) < 1/4 mile 10 points 1/4 to 1/2 mile 5 points ts > 1/2 mile 0 points	
	Total points for operation – animal confinement unit	

B. Operations-large livestock and feeding operations (usually dairies and feed lots).							
1) Locality of existing fa			•				
1A. In a 100 yr. Flo	1A. In a 100 yr. Floodplain (yes = 10 points) points						
1B. Depth to ground	1B. Depth to groundwater (10 points) points						
100/depth in feet to groundwater							
	face water (10 point ce in feet to surface		points				
2) Plan Components:	adequate	exists inadequate	nonexistent				
	0.0 pts.	5 pts.	10 pts.				
Collection and Transport							
Storage or Treatment							
Seepage Control	Seepage Control						
Transfer and Utilization
